T3 Live, LLC is a financial publisher that disseminates information about economic, business, and capital markets issues through various media. T3 Live is not a Broker-Dealer, an Investment Adviser, or any other type of business subject to regulation by the SEC, CFTC, state securities regulators or any "self-regulatory organization" (such as FINRA). Although T3 Live and T3 Trading Group, LLC are affiliated companies by virtue of common ownership, the companies are managed separately and engage in different businesses.

The programs that T3 Live distributes (including the "Virtual Trading Floor," articles, commentary, videos, blogs and social media postings) are for informational and educational purposes only. No one should consider the information disseminated by T3 Live to be personalized investment advice, a recommendation to buy, sell or hold any investment, an offer (or a solicitation of an offer) to buy or sell any investment, or the provision of any other kind of advice that would require T3 Live to register as a broker-dealer, investment adviser or similar entity. No one associated with T3 Live is authorized to make any representation to the contrary.

T3 Live provides information that viewers of its programs may consider in making their own investment decisions. However, any viewer will be responsible for considering such information carefully and evaluating how it might relate to that viewer's own decision to buy, sell or hold any investment. Such decisions must be based on that viewer's individual and independent evaluation of his or her financial circumstances, investment objectives, risk tolerance, liquidity needs, family commitments and other factors, not in reliance on any information obtained from T3 Live.

Statements by any person (whether identified as associated with T3 Live, T3 Trading Group, or any other entity) represent the opinions of that person only and do not necessarily reflect the opinions of T3 Live or any other person associated with T3 Live.

It is possible that any individual providing information or expressing an opinion on any T3 Live program may hold an investment position (or may be contemplating holding an investment position) that is inconsistent with the information provided or the opinion being expressed. This may reflect the financial or other circumstances of the individual or it may reflect some other consideration. Viewers of T3 Live programs should take this into account when evaluating the information provided or the opinion being expressed.

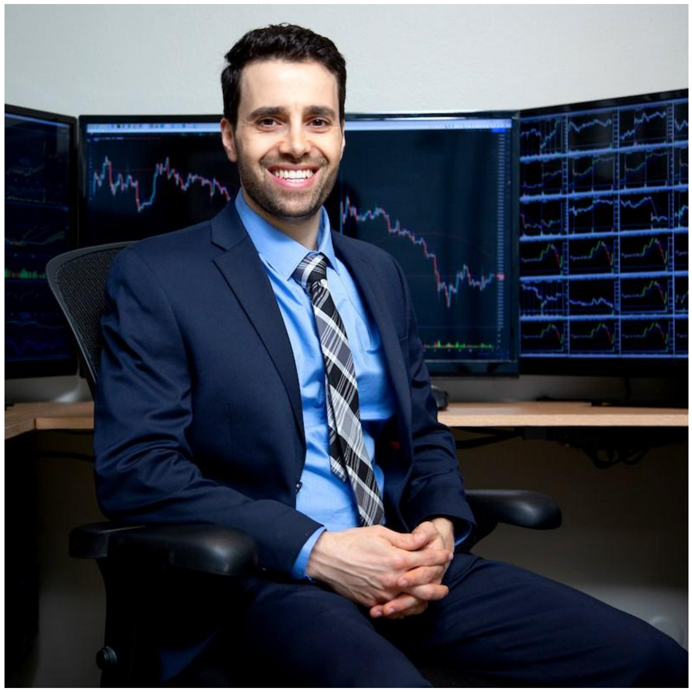
Although T3 Live strives to provide accurate and reliable information from sources that it believes to be reliable, T3 Live makes no guarantees as to the accuracy, completeness, timeliness, or correctness of any such information. T3 Live makes no guarantee or promise of any kind, express or implied, that anyone will profit from or avoid losses from using information disseminated through T3 Live.

All investments are subject to risk of loss, which you should consider in making any investment decisions. Viewers of T3 Live programs should consult with their financial advisors, attorneys, accountants or other qualified professionals prior to making any investment decision.

The risk of loss in trading options can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition. The high degree of leverage that is often obtainable in options trading may benefit you as well as conversely lead to large losses beyond your initial investment. Past results are not indicative of future results. No representation is being made that any account will or is likely to achieve profits similar to those shown.

T3 Trading Group, LLC is a Registered SEC Broker-Dealer and Member of FINRA SIPC. All trading conducted by contributors associated with T3 Trading Group, LLC on the Virtual Trading Floor is done through T3 Trading Group, LLC. For more information on T3 Trading Group, LLC please visit www.T3Trading.com.

About Sami Abusaad



Sami Abusaad is a professional trader and T3 Live's Director of Education.

Sami graduated Summa Cum Laude from St. Mary's College of California with a B.S. in accounting. He then served as a Senior Associate for KPMG, performing audits for Fortune 500 companies.

In 2007, Sami joined Pristine Trading and quickly became an expert in all Pristine strategies, including the groundbreaking Trading the Pristine Method.

After T3 Live's merger with Pristine in 2015, Sami was named Director of Education.

Today, Sami remains a successful professional day and swing trader, specializing in gap, climactic, and reversal strategies.

He also heads up the following T3 Live programs:

Earnings Engine

Strategic Day Trader Room (formerly known as the Black Room)

Strategic Swing Trader Newsletter & Training

Elite Private Mentorship

Welcome to Your Trend Analysis eBook!

Moving averages, support, and resistance are three of the most common terms you'll hear in technical analysis.

That's why I used the word "unsexy" in bright yellow on the cover of this ebook.

In fact, you might be rolling your eyes at me because you think it's all boring beginner stuff.

But once you see understand these concepts through my eyes, you'll understand why making money is all about mastering the basics.

Remember what Bruce Lee said:

"I fear not the man who has practiced 10,000 kicks once, but I fear the man who has practiced one kick 10,000 times."

And as an added bonus, I'll also teach you about the T3 Buy Setup, which is one of my most powerful and reliable tools.

Normally, this information is only available as part of the $795 Trading the Pristine Method® course.

But I wanted to give you a sneak peak at this powerful trading method, and give you the chance to learn new tactics that can get you started making money.

Once you're done with the educational portion of the eBook, check out page 17 -- I left some information on my services there.

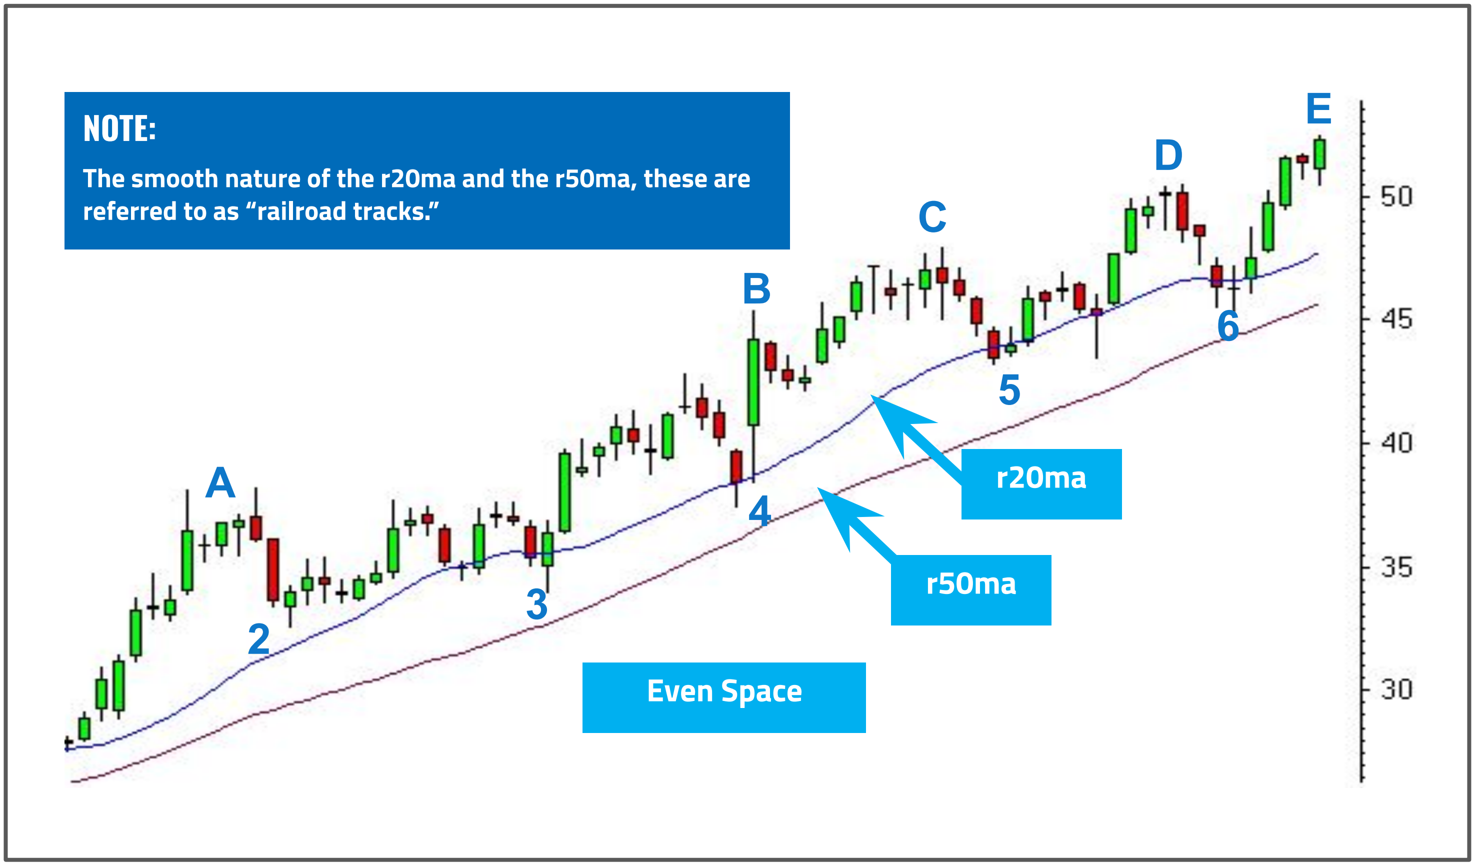
Good luck!

-Sami Abusaad
Director of Education, T3 Live

Trend Analysis 1

You know there are 3 ways a stock can move: up, down or sideways.

When a stock is moving up with a pattern of consistently higher highs and higher lows, it is considered to be in an uptrend.



A strong upgrend has a rising 20 period moving average and a rising 50 period moving averages.

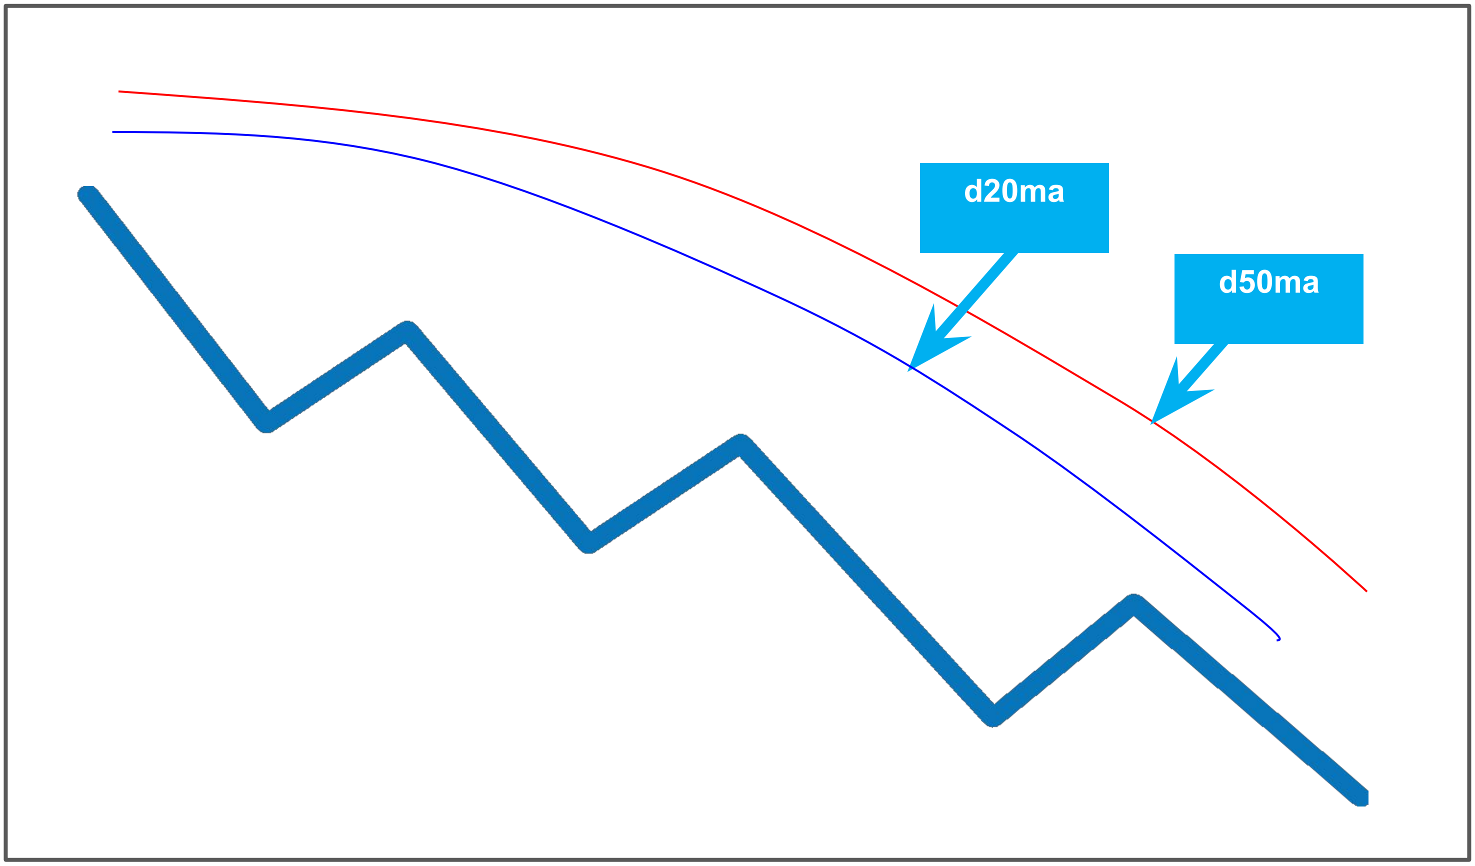
When the space between the two moving averages is relatively even throughout the uptrend, we call it "railroad tracks."

These are the hallmarks of an uptrend.

This is not sexy stuff, but this basic concept is the foundation of trend analysis.

Trend Analysis 2

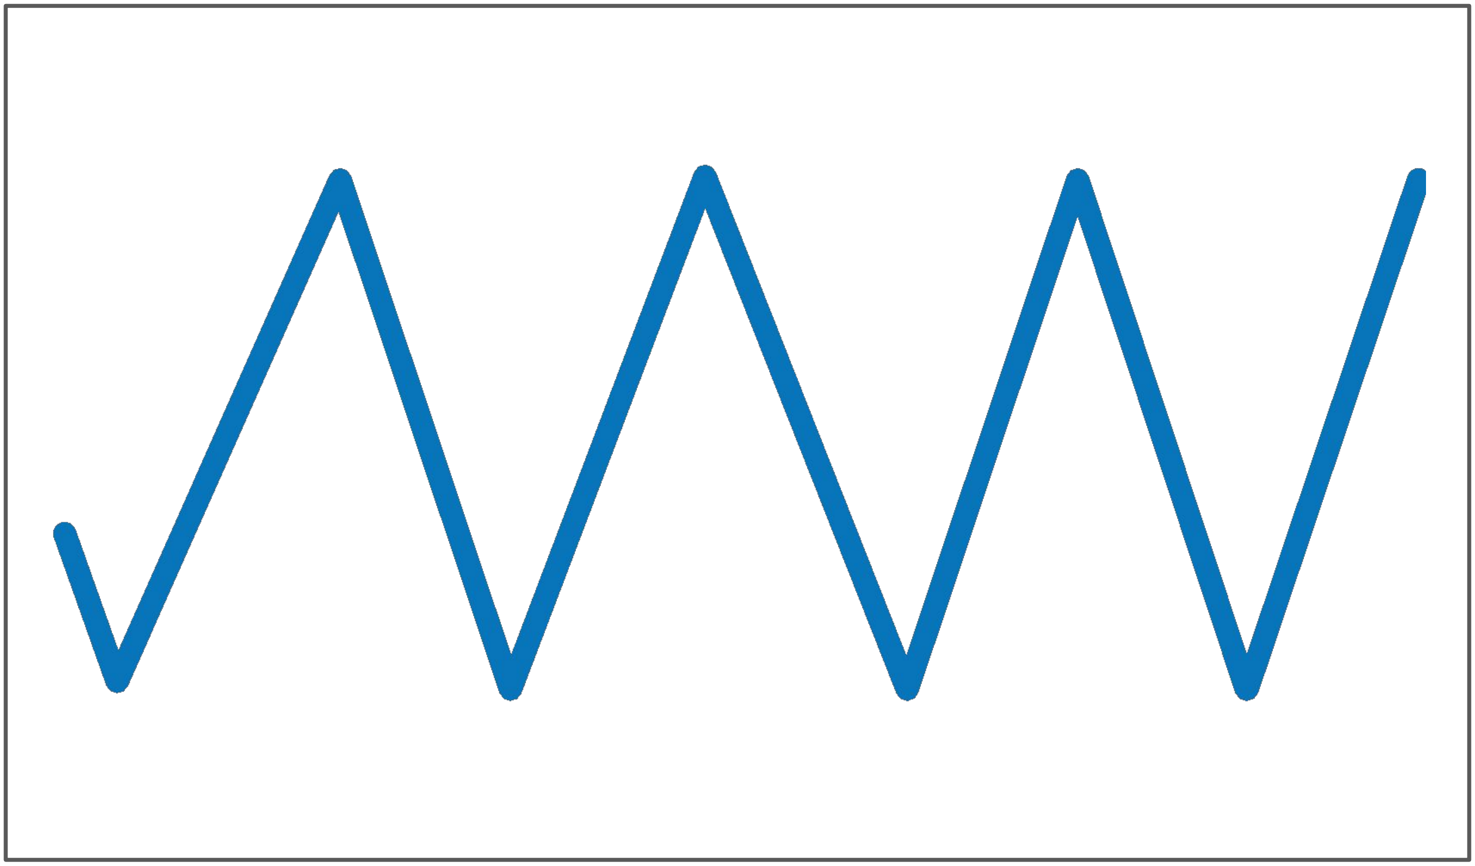
When a stock is moving down with a pattern of consistently lower highs and lower lows, it is considered to be in a downtrend.



Typically, we are looking for a declining 20 period moving average, a declining 50 period moving average, and relatively even space between the moving averages, which as you know, creates what we call "railroad tracks."

Trend Analysis 3

When a stock is moving down with a pattern of consistently lower highs and lower lows, it is considered to be in a downtrend.



A sideways trend is when we have a series of relatively equal highs and lows.

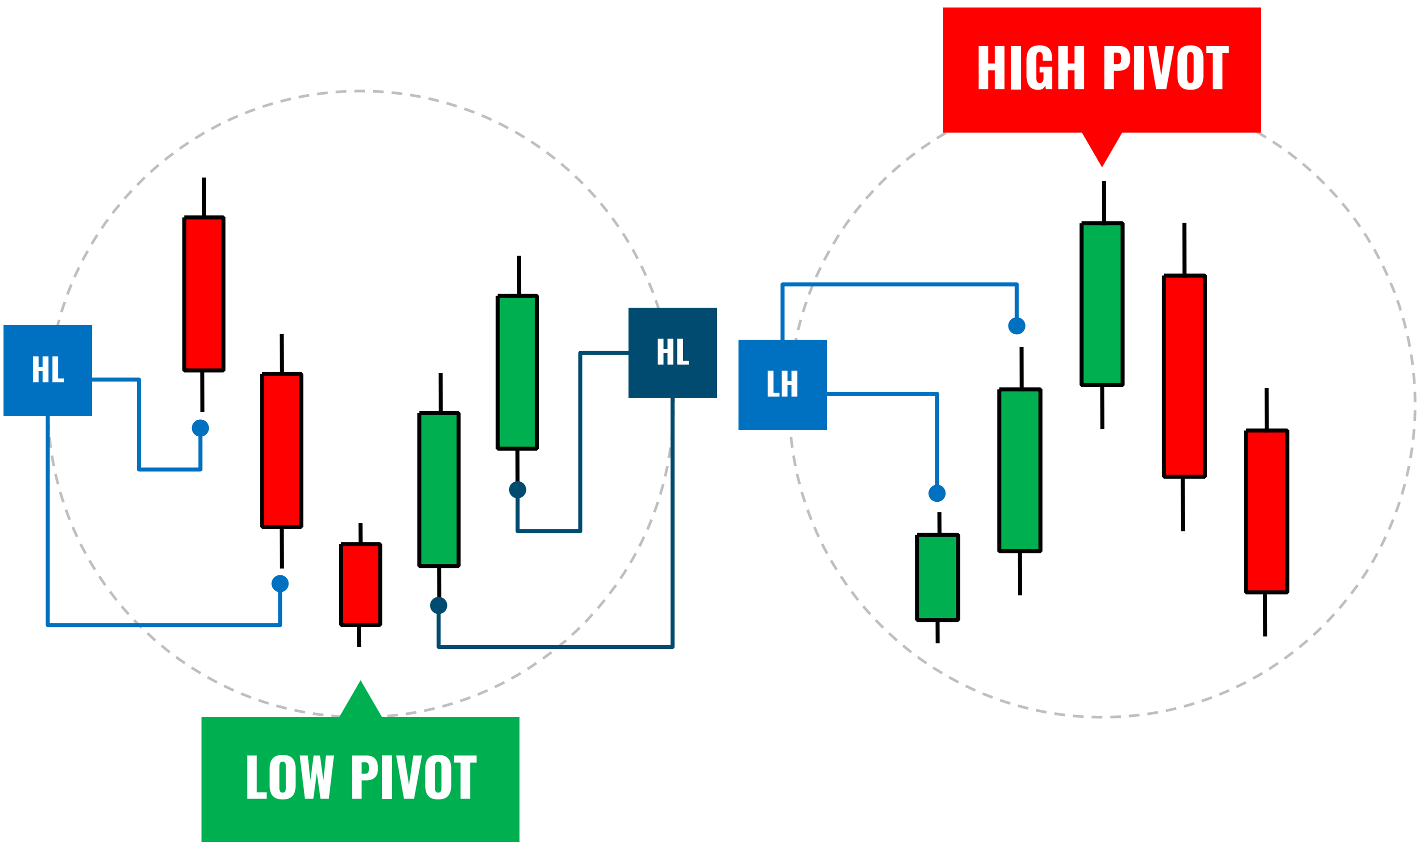
Typically, we are looking to buy the dips and short the rallies.

Sometimes, traders should look to buy high and buy even higher, but this is not one of those cases.

Pivots

In order to have a low pivot, you need a higher low (HL on the chart on the left) on either side of a candle. The low pivot represents support.

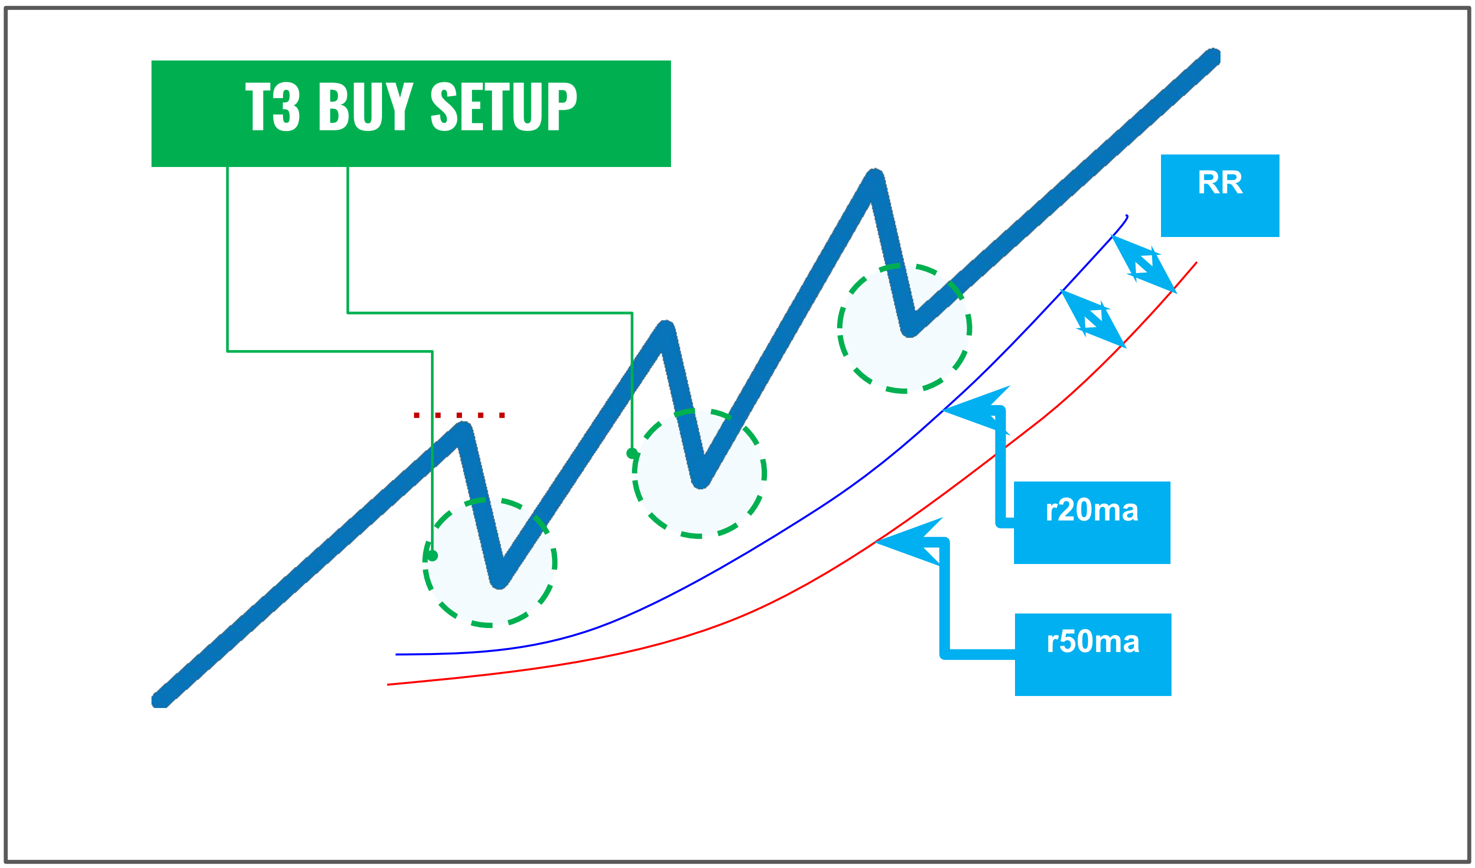
In order to have a high pivot, you have to have a lower high (LH) on the right charton either side of a candle. The high pivot represents resistance.



Trading Uptrends

As you know, The best uptrends will have higher highs and higher lows, as well as a rising 20 period moving average (r20ma), a rising 50 period moving average (r50ma) and a relatively even space in between the r20ma and the r50ma - called "railroad tracks."

In this type of uptrend, the best buys come on pullbacks towards the 20 period moving average.



This is a highly simplified version of what you can learn in the full Trading the Pristine Method® course.

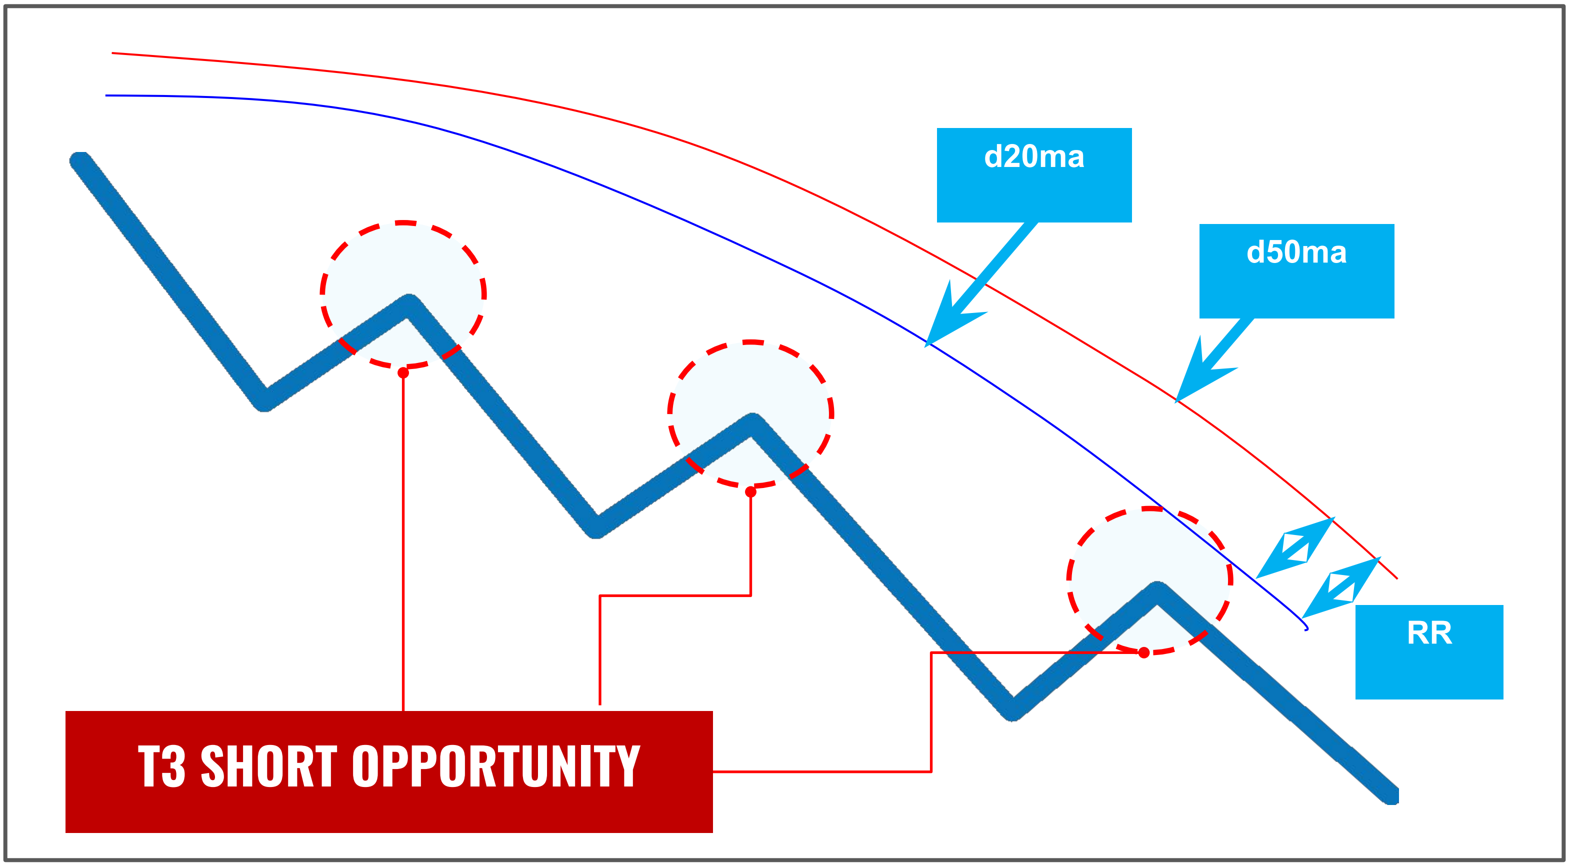
But take a look at your favorite uptrending stocks. See how often they back off to the 20 ma before bouncing.

Trading Downtrends

Now we're look at a downtrend.

It's the flip side of the uptrend you just saw. We have falling 20 and 50 mas and railroad tracks.

In these cases, we look for shorts on bounces towards the 20 ma.



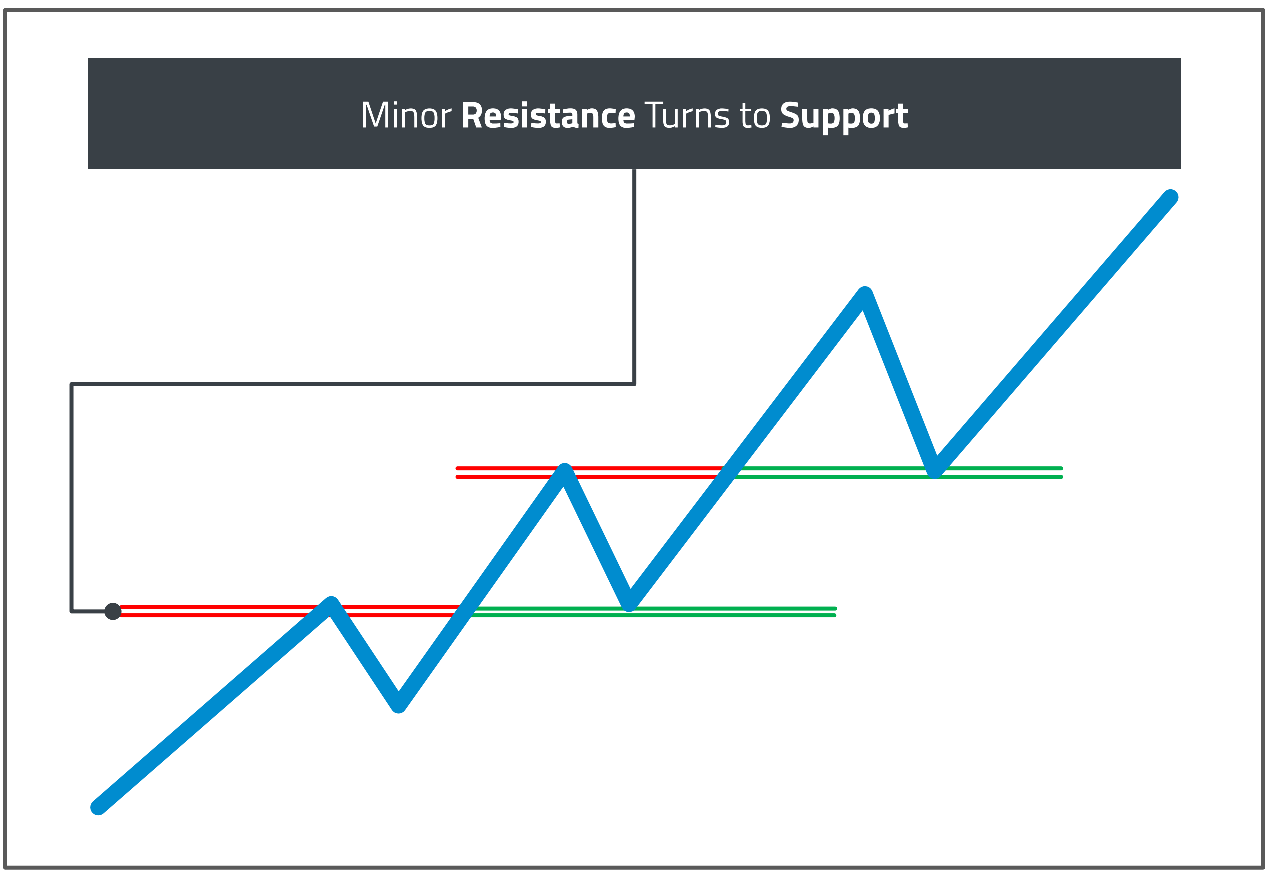
Again, this is a highly condensed version of the training you get in Trading the Pristine Method® live.

Now go look at some downtrending stocks. You'll be surprised at how often they crawl up to the 20 ma before falling back down.

Minor Support and Resistance

When a stock is uptrending, you have minor support, which is an area that lies at or just above the prior high (peak) of a steady uptrend. The basis for this support lies in the fact that resistance, once broken to the upside, often becomes support on a pullback.

Each prior high in an up trend is considered to be an area of resistance. Once the stock breaks above its prior high, that peak will often serve as minor support on dips, just as a ceiling once broken through to the upside becomes the floor.

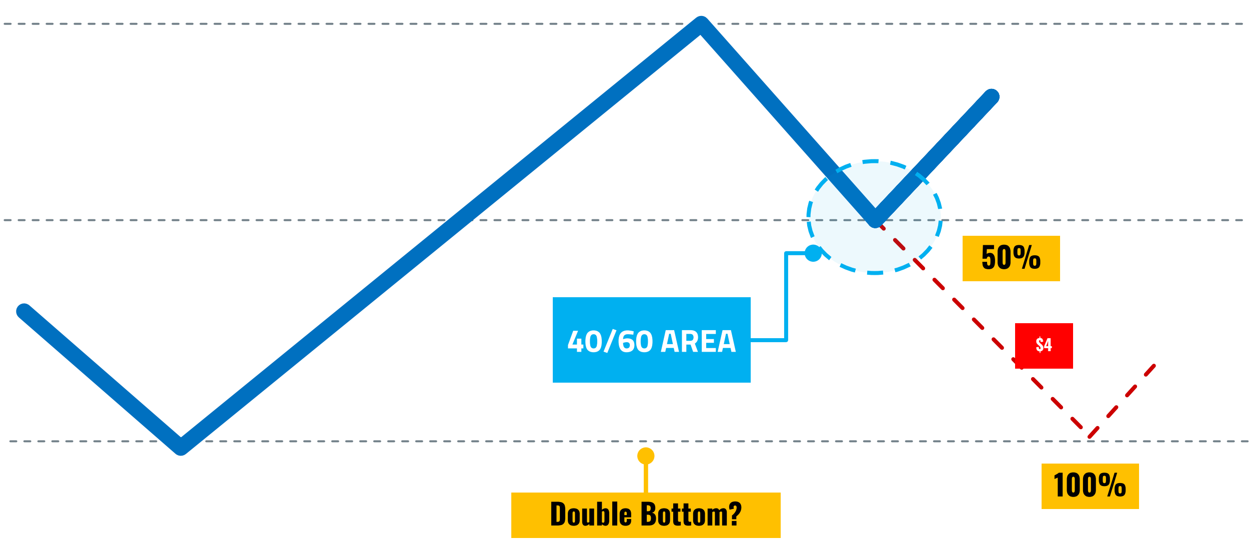


The 40%-60% Retracement Zone

In its most basic form, a bullish retracement is a downward price move in the exact opposite direction of the most recent up move. For example, if a stock advances $4, then pulls back by $2, it has experienced a 50% retracement. If the stock were to pull back the entire $4, it is said to have experienced a 100% retracement, which potentially sets up what is called a Double Bottom.

The best thing about minor support and the 40-60% retracement area is that they usually occur at the same place on a chart.

T3 TIP: Any rebound from the +40/60 range is to be considered more potent than one from another percent level.



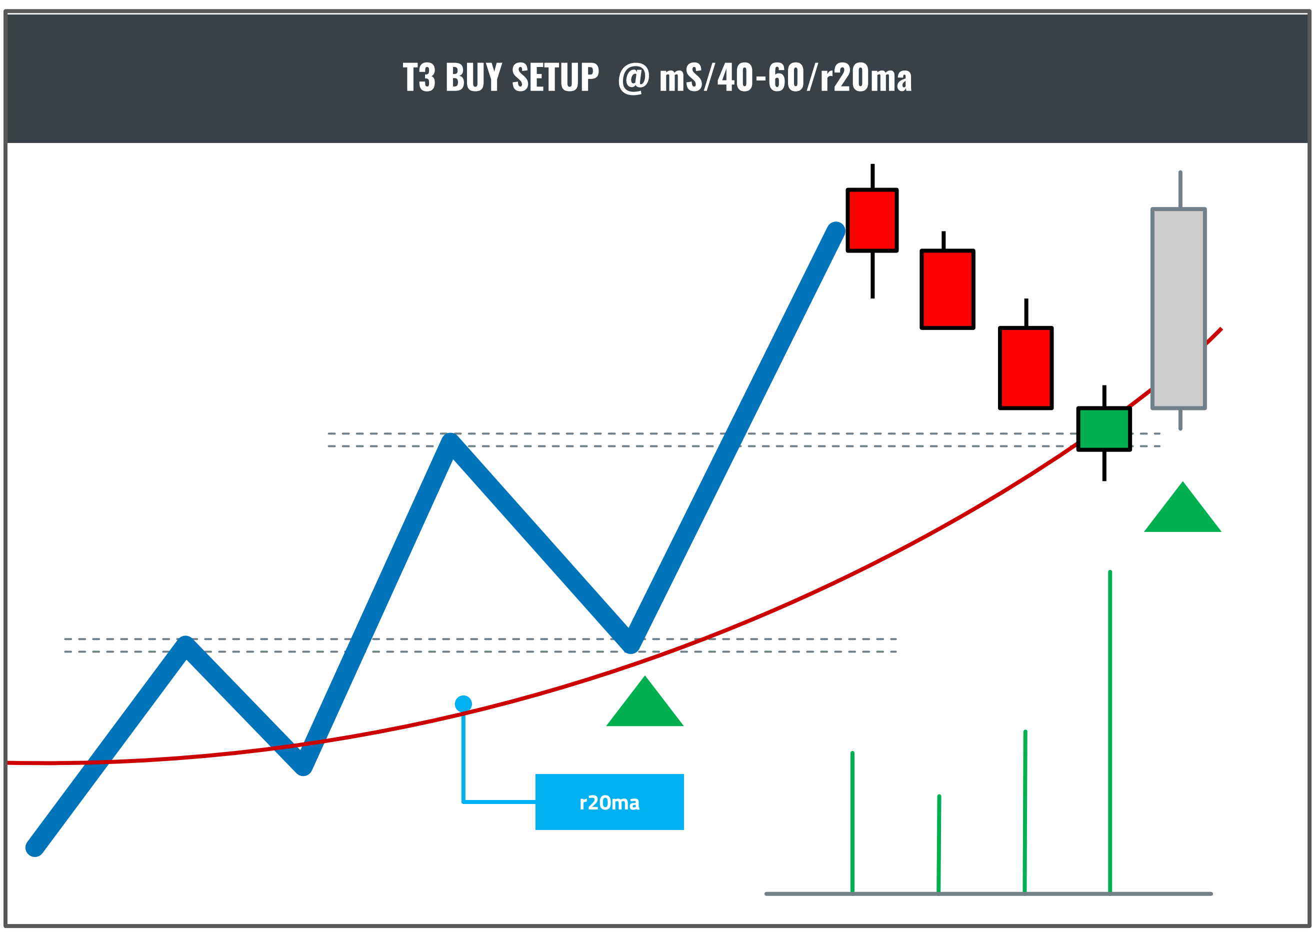
The Mighty Rising 20MA

The T3 Buy Setup combined with a rising ma is our favorite trading combo.

Traders who master this tactic will dramatically increase their odds of becoming a master trader.

In this case, you can see how the stock is pulling back to the rising 20 before exploding higher.

This is just another “unsexy” trading concept that can lead to major profits.



Major Support

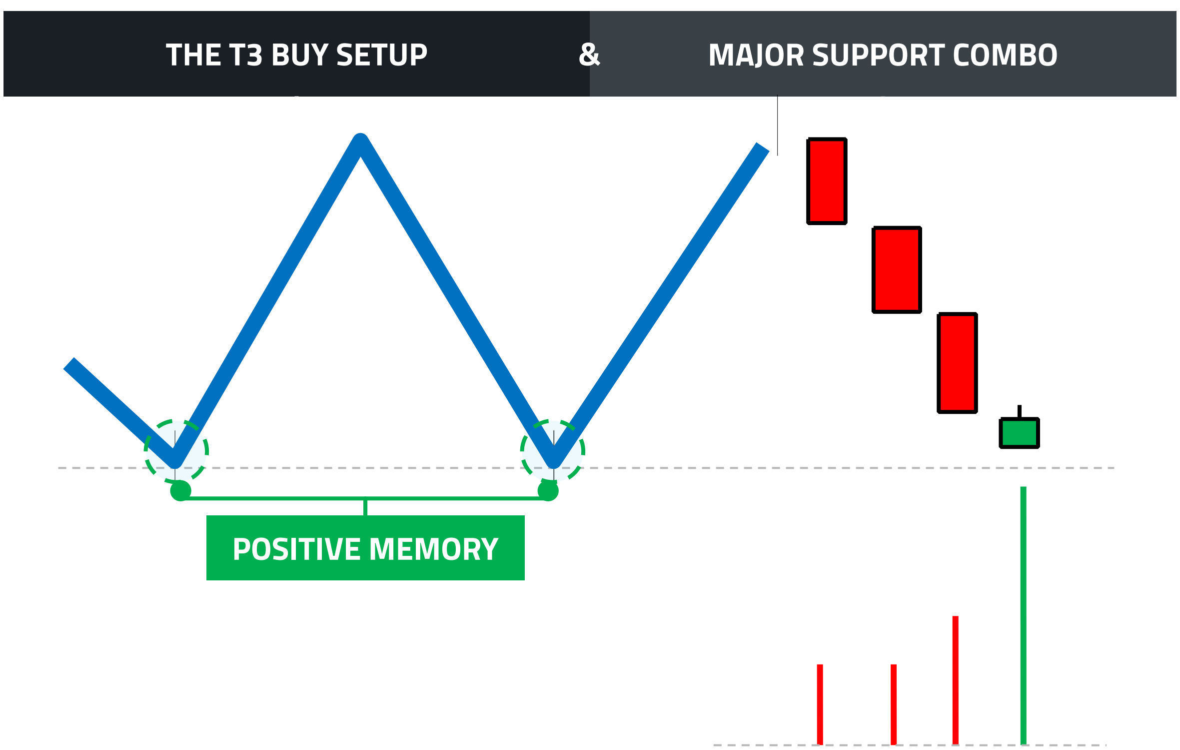
An uptrend has minor support and a downtrend has minor resistance, but a sideways trend has major support.

Major support is an area at which demand for a stock overwhelms the existing supply. In other words, it is an area at which the buying (which was light) begins to overwhelm the selling. This offers a unique buying opportunity.

The key thing to remember is that every low has contained within it a certain degree of "positive memory." This is what creates something close to a self-fulfilling prophecy, which is another way of saying it creates a very high probability long scenario. Negative memory (where buyers got hurt before) creates major resistance. When the stock hits that point for a second time, it's a great opportunity to short the stock. We'll just illustrate the long version here:

MAJOR PRICE SUPPORT (MS)

Trading Combo



Key Entry Points

To have a base, you must have at least a double bottom, or two pivots in the same area, plus two pivot highs. Once you have that, you have a buying opportunity every time the stock pulls back to those two prior pivot lows. The traders who bought the stock at pivot lows were rewarded and will look to buy again. The traders who bought the stock at pivot highs thinking it would breakout were hurt, creating negative memory - which is why pivot highs are a great place to sell.

In the case below, the major price resistance (MR) was created because the original buyers at point 1 got hurt, and want to get their money back.

This creates selling pressure at point 2.

T3 TIP: The group of sellers at top #2 dramatically increases, making it a great opportunity for a potential short play.

Thank You For Reading!

We hope you embrace the lessons you just learned in this ebook!
